

## EARLY VOCATIONAL REHABILITATION THE NETHERLANDS

“To integrate is a verb, Labour like a medicine.”

The **Early Vocational Rehabilitation** project provides early vocational rehabilitation to people who are unemployed, who have been absent from work for a long period, people with disabilities and people with chronic musculoskeletal pain.

The project intends to reduce medical treatment, the use of medicine and the cost of the care system in the long-term.

Following the concept that paid and/or unpaid work helps people integrate in society and makes them lead fulfilled lives, the aim of the project is to resume work place integration immediately after the start of the vocational rehabilitation.

The vocational rehabilitation takes a personalised and multidisciplinary approach, providing for individual and group treatment, guidance and aftercare.
