

ROMA HEALTH NETWORK EU MEMBER STATES

"There are 10-12 million Roma across Europe, many of which experience challenging health inequalities. We are working hard to address this.

We are confident that we can tackle these health inequalities and shape National Roma Equality and Inclusion Strategies through effective and consistent research, advocacy, policy development, monitoring, community organising and the empowerment of vulnerable Roma groups."

Roma Health Network aims to achieve social justice and health equity for Roma by promoting sustainable and integrated initiatives at the European and national level.

Through cross-sectoral cooperation, holistic responses and robust research, the Network is seeing positive results - particularly through the empowerment of vulnerable Roma groups such as women, LGBTQI+, people with disabilities and the elderly.

At the heart of the Roma Health Network's work is also engagement with policy dialogue and civil society, ensuring that the voices of Roma are heard at EU and national level decision making tables.
